Construction

- Complete extruded aluminum structure.
- Type II Class I performance anodizing standard
- 316L Stainless Steel hardware.
- 316L Stainless Steel couplings.
- 8 Barrel bolt canopy connection points.
- 2" diameter (.125" thick) corner mounting post.
- 1.5" diameter (.125" thick) 45° corner supports.
- 2mm thick canopy ribs specifically designed for added strength against the wind.
- Engineered for simplified assembly compared to competitors.
- Proprietary Marella Stainless Steel Stem.
- Even pressure clamping plate.
- Hitch Pin included to mechanically secure legs
- *(Customer must drills hole for Hitch Pin after installation)*
- Surface mounting deck plate for stem.,
- Base mounting options available to be used with stem only.

We're woven differently

The Recacril® and RECsens® canvases are treated with a special technological process to ensure the lasting quality of the fabric. In this process, nanoparticles completely cover the surface of the fibers in the fabric, forming a permanent coat. After treatment, both the surface and the inside of the fabric are permanently protected against dirt buildup and adverse effects of a wide variety of atmospheric agents. The Infinity treatment's low reactivity and high stability endow long-term protection to the fabric, especially against mildew, and provide excellent water and oil repellency.

Frankford uses only the best. Coats Dabond is a bonded, 250D x 3 ply twisted continuous filament polyester thread that offers excellent protection against UV light and abrasion. It is specifically designed to withstand demanding weather conditions. Dabond is the only environmentally friendly bonded polyester thread available on the market and is excellent at resisting mildew, rot, and the effects of bleaching.

- Tighter weave
- Superior stability
- Unsurpassed fade resistance
- Proprietary Infinity finishing Process
- Long-lasting water resistance
- Stain resistance
- Backed by 10-year and 7-year warranties

The Recacril® Solution Dyeing Process

Color pigments are applied to the polymer before the fiber is extruded. Therefore, the color is intrinsic; it is in the core of the fiber.

During the warping and spinning process, the fiber is transformed into Recacril® yarn that is fully dyed. The color does not just remain on the surface, but it is consistent right from the heart of the yarn.

As a result, Recasens' 100% solution-dyed acrylic fabrics have exceptional color retention as well as excellent technical properties and UV and weather resistance.
